High-speed processing at 2 ms Compact 4 -channel instrumentation conditioner

- Up to 4 units of 350 Ω strain-gage type transducers connected independently to respective amplifier circuits.
- Circuits are designed to make it difficult for a channel with transducer trouble to affect other channels.
- Switchable indicated value, channel to channel or the total
- Analog voltage output of all channels and the total
- High/low limit comparator for the total value
- High-speed output suitable for control, I/O delay approx. 10 ms
- Sensor check and self-test functions
- Indication range-19999 to 19999 with decimal point anywhere
